

AVON FIRE & RESCUE SERVICE

BACKGROUND

Avon Fire & Rescue Service (AF&RS), a leading provider of fire and rescue services in the UK, faced a challenge with their existing locker solutions.

The Challenge of Inefficient Locker Solutions

Before partnering with JC Metalworks, AF&RS was dissatisfied with their existing locker systems. The lockers lacked the desired aesthetic appeal and flexibility to meet the specific needs of their firefighters. Additionally, the existing solutions were not as durable or reliable as they required.

Why Avon Fire & Rescue Service Chose JC Metalworks

In November 2020, Avon Fire & Rescue Service chose JC Metalworks due to our expertise in designing and fabricating high-quality custom locker solutions. They were impressed by our reputation for delivering innovative and reliable metal fabrication products. We have built a strong partnership over the years.

How JC Metalworks Responded

When Avon Fire & Rescue Service approached JC Metalworks, we were briefed about their requirements. We then worked closely with them to develop a customised locker design that met their functional and aesthetic preferences.

Design Considerations

- ▶ **Size:** The locker size was determined by Avon Fire & Rescue Service's specific requirements.
- ▶ **Shelves:** The shelves for helmets and boots were designed with mesh and plastic coating to protect from excess water runoff.
- ▶ **External features:** A hook for the firefighter's jacket was included on the outside, and a bench was attached to facilitate easy gear change.
- ▶ **Internal features:** Specific requirements for hooks and rails were incorporated to meet the firefighters' needs.
- ▶ **Locks:** The lockers were equipped with locks that were easy to replace and included a master key for convenient management.
- ▶ **Enhanced aesthetics:** The lockers provide a modern and professional look that complements the fire stations' overall environment.
- ▶ **Improved functionality:** The modular design allows for flexibility in configuration, ensuring that the lockers meet the specific needs of each fire station.
- ▶ **Increased durability:** The lockers are constructed from high-quality materials, ensuring long-lasting performance and resistance to wear and tear.

Installation Partners

Having a trusted installation partner that complements our capabilities enables JC to offer an additional service to our customers.

We have worked with Melita on various projects for nearly 10 years. Melita's expertise helped in completing the locker project at Avon Fire and Rescue successfully. Their dedicated team ensured a seamless installation process by providing comprehensive services, including layout optimisation and efficient installation.
